

3D vision

SWEPT AWAY: The Perspectra swept-volume display renders three-dimensional images up to 25 centimeters in diameter. The graphics card sends the image to the Digital Light Processing projector, which bounces the projected pixels off relay optics to the spinning projection screen.

Perspectra

THAT'S DEEP: In this photocomposite of a DepthCube with its casing taken off, an image of a 3-D rainbow ribbon snakes through the depths of the display.
